

All Purified Water To Go stores are equipped with our state-of-the-art **Pure & Fresh Twelve Stage Water Purification System™**, dispensing Superior Quality Drinking Water.

**Our process removes sediment, lead, metals, arsenic, fluoride, chlorine, pharmaceutical drugs, chemicals, and all contaminants**, from our local municipal water source. Once the filtration and purification process is completed, the purified water goes into a holding tank for dispensing.

Our system is also equipped and programmed with ozone and ultra-violet light. Ozone is the fastest and most thorough disinfection available for water, while leaving no harmful residue in the water. Ozone is 3200 times faster than chlorine, yet reverts back to oxygen in a few hours or so. The ozone is injected into a mixing tank where it also treats the water in the holding tank. The injection of Ozone is done at scheduled times throughout the day so that we can provide our customers with the purest water possible without the use of chemicals. Our system is also quite capable in destroying pathogens, and bacteria such as E-Coli, Giardia, and Cryptosporidium, that chlorination cannot!

Customers can bring in their own containers or they can purchase one of the many top quality refillable bottles and dispensers available at our stores. By offering these containers, Purified Water To Go is helping eliminate the millions of "throw-away" single-use containers from our landfills.

Recent news coverage of lead found in our local water has many families concerned about the safety of their water supply. Low levels of lead poisoning often do not have symptoms, but even low amounts detected in children's blood are associated with decreased intelligence, reading and learning disabilities, behavioral problems, delayed puberty and slow growth. Our children's bodies cannot afford to be exposed to any amount of lead in their development stages. Expectant mothers should not drink or cook with tap water that is high in lead. Boiling tap water will soften the lead, making it easier to be absorbed in foods, etc., that is consumed and will affect not only her health but the health and development of her unborn child.

At Purified Water To Go, we are dedicated to providing you with superior drinking water, customer service, and prices. Our staff is always available to offer you advice and assistance in selecting products and accessories to meet your water needs.
